Name _____ Date _____ Score _____ / 10

Show your work under each problem, one step per line, and check your answer. Word problems: name the unknown, write the equation, solve, and answer in a sentence with units.

1. Two parallel lines are cut by a transversal. One angle measures 85°. Find its corresponding partner. EASY

2. Two parallel lines are cut by a transversal. One angle measures 125°. Find its alternate interior partner. EASY

3. Two parallel lines are cut by a transversal. One angle measures 145°. Find its alternate interior partner. EASY

4. Parallel lines are cut by a transversal. Alternate exterior angles measure $(3x + 4)^\circ$ and $(5x - 12)^\circ$. Find x and both angles. MEDIUM

5. Parallel lines are cut by a transversal. Corresponding angles measure $(2x + 7)^\circ$ and $(5x - 38)^\circ$. Find x and both angles. MEDIUM

6. Parallel lines are cut by a transversal. Same-side interior angles measure $(3x + 2)^\circ$ and $(4x + 3)^\circ$. Find x and both angles. MEDIUM

7. Parallel lines are cut by a transversal. Corresponding angles measure $(4x + 19)^\circ$ and $(3x + 43)^\circ$. Find x and both angles. MEDIUM

8. Parallel lines are cut by a transversal. Corresponding angles measure $(4x + 15)^\circ$ and $(1x + 90)^\circ$. Find x and both angles. HARD

9. Parallel lines are cut by a transversal. Alternate interior angles measure $(5x - 10)^\circ$ and $(2x + 35)^\circ$. Find x and both angles. HARD

10. Parallel lines are cut by a transversal. Alternate interior angles measure $(5x - 18)^\circ$ and $(2x + 48)^\circ$. Find x and both angles. HARD
